## LIST OF ABBREVIATIONS & ACRONYMS

AADD	-	Annual Average Daily Demand
CARL	-	Current Annual Real Losses
CF	-	Consequence of Failure
d	-	Day
DMA	-	District Management Areas
DWS	-	Department of Water and Sanitation
GIS	-	Geographic Information System
GLS	-	GLS Consulting
ILI	-	Infrastructure Leakage Index
IWA	-	International Water Association
IRP	-	Integrated Water Resource Planning
kL	-	Kilolitre
Km	-	Kilometre
L	-	Litres
LF	-	Likelihood of Failure
m	-	Meter
MNF	-	Minimum Night Flow
NRW	-	Non-Revenue Water
PRP	-	Pipe Replacement Prioritisation
PRV	-	Pressure Reducing Valve
RMR	-	Remote Meter Reading
SWIFT	-	Sewer Water Interface For Treasury Systems
UARL	-	Unavoidable Annual Real Losses
UAW	-	Unaccounted For Water
VAT	-	Value Added Tax
WADISO	-	Water Distribution System Optimization program (software)
WC	-	Water Conservation
WDM	-	Water Demand Management
WTW	-	Water Treatment Works

## 1. INTRODUCTION

### 1.1 Background

Water is a precious resource that has to be used as efficiently as possible before any new water resources are developed, as new water augmentation schemes are costly. A water conservation and water demand management (WC/WDM) strategy is a fundamental step in promoting water use efficiency and is consistent with the National Water Act (Act 36 of 1998) which emphasises effective management of our water resources.

Cape Agulhas Municipality appointed GLS to perform the WC/WDM study.

### 1.2 Objectives

The primary objectives of this study can be summarised as:

- Analysing the treasury data in order to identify billing and water meter reading anomalies.
- Identifying projects that could be implemented to promote WC/WDM in order to reduce unaccounted for water (UAW), which includes water losses.

### 1.3 Brief to GLS

The brief to GLS is as follows:

- To perform an analysis of recent treasury water meter billing data using the Swift software. Anomalies such as stands not on the billing system, stands without a water meter, stands with zero water demands, etc. should be identified and listed for future investigation in order to improve the data integrity and ultimately reduce UAW.
- Given the previous WC/WDM strategies adopted and WC/WDM work (including studies) performed in recent years in the area, identify the priority WC/WDM projects needed to be planned, funded and implemented.
- The study area is focussed on the towns of Bredasdorp, Napier, Struisbaai, Waenhuiskrans, L'Agulhas and Suiderstrand

### 1.4 Methodology

The methodology in undertaking this study is described as follows:

#### 1.4.1 Swift analysis

A Swift analysis of the treasury data for Cape Agulhas Municipality has been undertaken for the period 1 January 2018 to 31 December 2018. While a Swift analysis for Cape Agulhas Municipality was available from previous studies performed by GLS, a new data extract and Swift analysis was produced as part of this study. From this Swift analysis the anomalies in the data could be identified and the lists of stands produced.

Swift is a computer program that performs statistical analyses of data in municipal billing databases and provides important information to the Municipal Infrastructure Manager. It also provides a link between the sewer and water distribution models for accurate modelling of the water demand or effluent production. The name SWIFT is derived from “**Sewer Water Interface For Treasury systems**”.

In the quest for a water service provider to optimize the service to consumers in terms of providing sufficient water at an affordable cost the need for accurate information about the system is becoming ever more important. This information is in fact available in Municipal Treasury Databases where the readings for every water meter in the system are stored on a monthly basis along with land use and other stand related information. The problem is that the treasury systems were not designed to produce the information and statistical reports required by the infrastructure managers. The data is also not spatially referenced, which would allow links to cadastral database applications in a geographic information system (GIS). It is therefore necessary to extract the information from the databases and use additional manipulation through software designed for the purpose, to perform the required statistical calculations.

Although the calculations needed to produce the information are theoretically simple, the volume of data that is involved makes it difficult to use spreadsheets. Even in relatively small towns, where there are less than 15 000 stands, it has been found that spreadsheets become prohibitively inefficient and clumsy.

Swift was designed specifically for the purposes of the infrastructure manager and as such produces, from large quantities of information, consumption related reports required, if not by law, then for the effective management of the system. Swift can be used to produce statistics used in:

- Water Demand Management Initiatives
- Water Audits
- Non-revenue Water Calculations
- Calculation of Water Tariffs
- Water Consumptions Profiles for User Defined Categories (e.g. Land Use)
- Water and Sewer Master Plans
- Identification of Faulty Meter Readings
- Population of water and sewer models' databases

#### 1.4.2 Identifying WC/WDM projects to be implemented

In order to identify priority WC/WDM projects to be implemented for each of the Towns in the Municipality, a high level review of related studies performed in recent years for the Municipality, was conducted. Furthermore, a meeting was held with the Municipality to firstly determine which WC/WDM initiatives have already been implemented, or are in the process of being implemented, and secondly to discuss the projects proposed in this report.

#### 1.5 Legal requirements

It should be noted that there is a legal imperative for municipalities to meter consumers and manage water losses in compliance with legislation and standards. According to Government Gazette No.22355 (Regulation Gazette No.7079) Vol.432, published on 8 June 2001:

- A water services institution must
  - Within two years after promulgation of these regulations, fit a suitable water volume measuring device or volume controlling device to all user connections provided with water supply services that are existing at the time of commencement of these regulations.
  - Fit a suitable water volume measuring device or volume controlling device to every user connection made after the commencement of these regulations.
- If constructed or installed after promulgation of these regulations, a suitable water volume measuring device or volume controlling device must be fitted to separately measure or control the water supply to every
  - Individual dwelling within a new sectional title development, group housing development or apartment building.
  - Individual building, having a maximum designed flow rate exceeding 60L/minute within any commercial or institutional complex.
- An irrigation system with a maximum designed flow rate exceeding 60L/minute that uses water supplied by a water services institution, must be fitted with a suitable water volume measuring device or volume controlling device.
- Where the water supplied is measured by way of a meter, that meter must comply with the Trade Metrology Act, 1973 (Act No 77 of 1973).

#### 1.6 IWA water balance table

The International Water Association (IWA) water balance table (shown in Table 1 below) has become the accepted norm by most municipalities to calculate water balances.

Table 1: IWA water balance table

Nett System Input	Authorised Consumption	Billed Authorised Consumption	Billed metered Consumption	Potential Revenue Water
			Billed unmetered Consumption	
		Unbilled Authorised Consumption	Unbilled metered Consumption	Non-Revenue Water
			Unbilled unmetered Consumption	
	Water losses	Apparent losses	Unauthorised Consumption	
			Consumer meter errors	
	Real Losses			

The components of the water balance table can be described as follows:

- Nett System Input is the volume of total bulk water input to the distribution system.
- Authorised Consumption is the volume of metered and/or unmetered water taken by registered consumers, the water supplier and others who are implicitly or explicitly authorised to do so by the water supplier, for residential, commercial and industrial purposes.
- Billed Authorised Consumption is the volume of authorised water which is billed and paid for. This is effectively the revenue water.
- Unbilled Authorised Consumption is the volume of authorised water which is not billed or paid for.
- Apparent Losses are unauthorised consumption (theft or illegal use) plus all technical and administrative inaccuracies associated with customer metering.

For the purposes of this study total water losses (unaccounted for water) is calculated as Nett System Input minus Authorised Consumption. The complete population of this IWA table is however not within the scope of this study.

## 2. STUDY ANALYSIS

### 2.1 Status of WC/WDM initiatives

The following WC/WDM initiatives have been implemented in Cape Agulhas Municipality in recent years:

- Water Pipe Replacement
- Pressure Management
- Perform water meter audit
- Replacement of Consumer Water Meters
- Domestic Leak Repairs at Indigent Households
- Water Management Devices at Indigent Households
- Municipal Plumbers Awareness on Water Losses
- Enhance Public Awareness on Water Issues
- Review of Water and Sewerage Tariffs
- Focused Leak Detection and Repair
- Water Balance per Zone
- Maximum Use of Treated Effluent

### 2.2 Water losses

#### 2.2.1 Current annual real losses (CARL)

The CARL is the difference between the bulk water input and the sum of the billed authorised consumption, the unbilled authorised consumption and the apparent losses, as described in the IWA water balance table above.

The CARL for the towns in Cape Agulhas Municipality are shown in Table 2 below.

Table 2: Summary of CARL volumes for towns in Cape Agulhas Municipality

Area	Time period	Bulk Input (kl)	Authorised consumption (kl)	Apparent losses (kl)	CARL (kl)	% CARL
Ceres	Jan '18 - Dec '18	3 546 145	2 515 763	236 988	793 394	22.4%
Op-die-Berg	Jan '18 - Dec '18	114 553	90 214	5 598	18 741	16.4%
Prince Alfred Hamlet	Jan '18 - Dec '18	670 950	408 384	60 390	202 176	30.1%
Tulbagh	Jan '18 - Dec '18	546 464	463 244	19 141	64 079	11.7%
Wolseley	Jan '18 - Dec '18	1 012 345	611 865	92 110	308 370	30.5%
<b>Witzenberg Municipality Total</b>		<b>5 890 457</b>	<b>4 089 470</b>	<b>414 227</b>	<b>1 386 760</b>	<b>23.5%</b>

The CARL volume for Cape Agulhas Municipality was calculated at 1 386 760 kL per year which equates to 23,5% of the bulk water input. For Cape Agulhas Municipality these figures are the difference between the volume of water put into the reticulation system (system input volume downstream of the treatment works) and the volume of authorised consumption and apparent losses, where:

Authorised consumption includes:

- billed metered consumers
  - water sold to consumers as abstracted through the municipal treasury system,
- billed-unmetered consumers
  - estimates for free basic water used in informal areas not metered,
- unbilled-metered consumers,
- unbilled-unmetered consumers
  - estimates for water consumption at unmetered erven
  - estimates for water used in informal areas not metered that are above the free basic portion
  - corrections for metered erven with an abnormal low consumption
  - estimates for water used in unmetered public open spaces
  - estimates for water used in other legitimate use such as fire fighting or scouring of water lines

and apparent losses includes:

- water used through illegal connections
- water used but not billed for because of inaccurate meters, data transfer errors, low estimate readings or any administrative errors.

The detailed calculations for the Cape Agulhas Municipality water balance are shown in the annexures at the end of the report.

This includes a summary of the IWA table for each town (annexures A1 to A6), the monthly non-revenue values for each town (annexures B1 to B6) and the detail IWA calculations for each system (annexures C1 to C6).

## 2.2.2 Unavoidable annual real losses (UARL)

The UARL represent the minimum system losses that could ultimately be achieved in a water system. The equation to calculate UARL values for a water system is:

$$\text{UARL} = (18 * L_m + 0.8 * N_c + 25 * L_p) * P$$

where

$L_m$	=	length of mains (km)
$N_c$	=	number of service connections
$L_p$	=	length of unmetered underground pipe from street edge to customer meter (km)
$P$	=	average operating pressure at average zone point (m)

The existing UARL values for Cape Agulhas towns are shown in Table 3 below.

Table 3: Unavoidable annual real losses (UARL) for towns in Cape Agulhas

Unavoidable Annual Real Losses (UARL)					
Town/distribution zone	$L_m$ (km)	$N_c$	$L_p$ (km)	$P$ (m)	UARL (kL/d)
<b>Bredasdorp</b>					
<b>Napier</b>					
<b>Struisbaai</b>					
<b>Waenhuiskrans</b>					
<b>L'Agulhas</b>					
<b>Suiderstrand</b>					
<b>Cape Agulhas Total</b>					

The length of the water mains and average operating pressure for the town was calculated from the existing water distribution system optimization program (WADISO) water models of Cape Agulhas Municipality.

All customer meters are located at the street property boundary edge, therefore the value for  $L_p$  in the equation is assumed to be zero. The number of service connections for each town was calculated by SWIFT based on the number of stands in the town.

### 2.2.3 Infrastructure leakage index (ILI)

The ILI measures how effectively the real losses in a system are managed under the current water network system parameters, and is simply the ratio of the current annual real losses divided by the unavoidable annual real losses.

$$ILI = CARL / UARL$$

A study by the Water Research Commission in 2002 (Report TT159/01) called "Benchmarking of Leakage for Water Suppliers in South Africa" indicated that the ILI values for the target group ranged from 1.0 to approximately 28.0, with an average value in the order of 7.0. The report identified that for South African conditions it would be unusual to achieve an ILI value of below 2.0 and values in the order of approximately 5.0 are common and represent systems in a reasonable condition. A low value ( $< 3.0$ ) indicates a system with little room for leakage reduction whereas a higher value indicates that there is room to implement measures to reduce water losses in the system. The ILI values for towns in Cape Agulhas are shown in Table 4 below.

As explained above, an ILI value of 3.5 is very good and means that little room for leakage reduction exists. With the CARL probably not reflecting the true situation, this ILI figure should however be verified.

### 2.3 Analysis of treasury data

The Swift software as described in par 1.4.1 was used to perform the treasury data analysis for Cape Agulhas Municipality for the period 1 July 2015 to 31 June 2016.

Cape Agulhas has a SAMRAS treasury system, with a single treasury system for all the towns in the municipal area. From this Swift analysis anomalies in the data could be identified and the lists of stands that need to be investigated produced. The stands that need to be investigated are shown on the lists included in Annexure B to Annexure G as well as the layout drawings Figure 1 to Figure 6. The findings of this analysis are presented and discussed below.

#### 2.3.1 Link between treasury data and GIS data

A link between the treasury database and the GIS data is created by using the Surveyor General stand number which should be common to both databases. A summary of the link that was created is shown in Table 5.

Table 5: Summary of treasury data link with GIS for towns in Cape Agulhas

Description		Municipal stands <sup>2</sup>
<b>GIS link:</b>		
Number of records in treasury data		
Number of records in Pre-Paid data		
Number of unlinked records <sup>1</sup>		
Number of stands		
Stands linked to GIS	no.	
	%	
<b>Meters:</b>		
Number of meters		
Meters linked to GIS	no.	
	%	
<b>Water demand:</b>		
Water sold (kL/d)		
AADD linked to GIS	kL/d	
	%	

## Notes:

- <sup>1</sup> All records in the treasury systems with no link to the GIS are shown in Appenix B
- <sup>2</sup> Erven in Overstrand Municipality

There are the same amount of records in the data than stands. Typically these values should be close with the only justification for multiple records per stand being where there are multiple meters on a stand. In this case the difference is zero.

There are a small number of stands in the treasury database that could not be linked spatially. For Cape Agulhas only 414 stands of the 34 028 stands (i.e. 1,2%) could not be linked. This should be investigated and corrected. The list of stands on the treasury database that could not be linked to the GIS database has been included in Annexure B.

For Cape Agulhas 28 480 stands of the 28 840 stands (i.e. 99,8%) which have water meters could be linked. This link is very high. The list of unmetered stands are displayed in Annexure C1.

For Cape Agulhas 13 805 kL/d of the 13 909 kL/d sold (i.e. 99%) could be linked to stands. This link is also satisfactorily high.

### 2.3.2 Occupied stands with no water meter

A summary of the number of occupied stands in the towns of Cape Agulhas which do not have a water meter installation is shown in Table 6 below.

Table 6: Summary of occupied stands with no water meter for towns in Cape Agulhas

Town/area	Number of stands without water meter*	Total number of stands	% of stands without water meter
Cape Agulhas Municipality			
<b>Total</b>			

Cape Agulhas has 166 stands that are occupied but do not have a water meter installation. Apart from the fact that water meters are required per legislation (see par 1.5 above) it is highly recommended that water meters are installed at these stands as this is certainly not good practice for WC/WDM purposes.

The list of occupied stands on the treasury database in Cape Agulhas that do not have a water meter installation has been included in Annexure C1.

### 2.3.3 Occupied stands with water meter but zero demand

A summary of the number of occupied stands of the towns in Cape Agulhas which have a water meter but with zero demand is shown in Table 7.

Table 7: Summary of stands with a water meter but zero demand in Cape Agulhas

Town/area	Number of stands with AADD = 0 kL/d	Total number of stands	% of stands with AADD = 0 kL/d
Cape Agulhas Municipality			
<b>Total</b>			

A water consumption of 0 kL per day is an indication that something could be wrong and needs to be investigated.

The list of stands in Cape Agulhas that are occupied and have a water meter but with zero water demand has been included in Annexure C2.

### 2.3.4 Stands with low average consumption

A summary of the number of occupied stands of the towns in Cape Agulhas which have a water consumption of less than 0.1 kL/d is shown in Table 8.

Table 8: Summary of stands with AADD &lt; 0.1 kL/d for Cape Agulhas

Town/area	Number of stands with AADD < 0,1 kL/d	Total number of stands	% of stands with AADD < 0,1 kL/d
Cape Agulhas Municipality			
<b>Total</b>			

A water consumption of less than 0.1 kL per day on average over a period of a year, even taking into account the possible effect of seasonal consumption, is very low and needs to be investigated.

The list of stands in Cape Agulhas that have an annual average daily demand (AADD) < 0.1kL/d has been included in Annexure D.

### 2.3.5 Stands with substantial increase or decrease in water demands

The Swift software functionality creates the opportunity to identify stands which have experienced a substantial increase or substantial decrease in water demands over the last 3 months of the data that has been analysed. It simply takes the average water demand of the last 3 months and compares that to the average water demand of the previous 9 months. To eliminate the possible effect of seasonal demand, only the stands with a 90% increase or 90% decrease in demand have been identified. It may be that a perfect explanation for the drastic change in water demand exists, but it is recommended that the situation at least warrants an investigation.

The list of stands in Cape Agulhas that have experienced a substantial increase in water demand has been included in Annexure E1 and the list of stands that have experienced a substantial decrease in water demand have been included in Annexure E2.

### 2.3.6 Large water users

Large users (> 10 kL/d) have been identified from the Swift analysis results. The list of large water users within Cape Agulhas has been included in Annexure G.

The major consumers should be visited individually with the objective of obtaining insight into their consumption components and patterns and to investigate potential water saving measures that can be applied at each of these consumers. Visits to large users should form an essential step in the implementation of any WC/WDM strategy.

## 2.4 Proposed WC/WDM projects

### 2.4.1 Projects identified

After considering the results of the Swift analysis described in this report, the review of relevant WC/WDM studies and the outcome of the meeting held with officials of the Cape Agulhas Municipality, the projects summarised in Table 9 below, are proposed.

Table 9: Summary of proposed WC/WDM projects for towns in Cape Agulhas

No	Item	Description and summary of tasks	Estimated costs (Rands excluding VAT)
1	Dedicated WC/WDM Officer	<ul style="list-style-type: none"> <li>- Cape Agulhas Municipality should create a dedicated WC/WDM officer post and recruit a suitable person for the position.</li> <li>- The number of people involved with WC/WDM for Cape Agulhas Municipality can later be increased as and when required.</li> </ul>	<p>To be determined by Cape Agulhas Municipality.</p> <p>R600 000</p>
2	Improved billing by continued co-operation with Finance Department	<ul style="list-style-type: none"> <li>- Improve the integrity of metering and billing data through an investigation into the list of treasury records without a GIS link, the list of occupied stands with a zero water demand, the list of occupied stands without a water meter as well as investigations into the list of stands with substantial increases and decreases in water demands.</li> </ul>	<p>Can be performed by Cape Agulhas Municipality or in combination with a contractor.</p> <p>R1 000 000</p>
3	Large water users	<ul style="list-style-type: none"> <li>- Investigate the sites of large water users in order to assess potential water saving measures.</li> </ul>	<p>Can be performed by Cape Agulhas Municipality or outsourced.</p> <p>R300 000</p>
4	Pressure management	<ul style="list-style-type: none"> <li>- Investigate, including hydraulic analysis, identify and implement additional pressure management projects.</li> </ul>	<ul style="list-style-type: none"> <li>- Study to identify new pressure management zones:</li> </ul> <p>R400 000</p> <ul style="list-style-type: none"> <li>- Budget to implement pressure management: To be determined after the investigation</li> </ul>

5	Continue with Pipe Replacement	<ul style="list-style-type: none"> <li>- Continue with pipe replacement programme based on pipe replacement prioritisation (PRP) study dated January 2014.</li> <li>- Update PRP study whereby a list of the top 200 pipes with the highest priority to be replaced is produced, including an estimated replacement costs for each pipe.</li> </ul>	<ul style="list-style-type: none"> <li>- To be determined by Cape Agulhas Municipality.</li> <li>- Update PRP study R200 000</li> </ul>
6	Continue with Water Meter Replacement	<ul style="list-style-type: none"> <li>- Based on the results of the 2011 water meter audits all eligible/broken meters should be replaced and any un-metered stands identified should be metered.</li> </ul>	<ul style="list-style-type: none"> <li>- To be determined by Cape Agulhas Municipality.</li> </ul>
7	Refine Zone Water Balancing	<ul style="list-style-type: none"> <li>- Investigate and identify possible new bulk meter positions in order to create additional sub-zone district management areas (DMA's).</li> <li>- Install new bulk meters at these locations and record bulk meter readings monthly for all bulk water meters.</li> </ul>	<ul style="list-style-type: none"> <li>- Study investigation: R100 000</li> <li>- Installation of bulk meters (first phase of roughly 10 meters) at assumed cost of R200 000 per meter = R2 000 000.</li> </ul>
8	Monitoring of ILI's per Zone	<ul style="list-style-type: none"> <li>- Investigate and identify zones with high ILI values, determine which zones need to be monitored and where to implement additional WDM measures to lower ILI's</li> </ul>	<ul style="list-style-type: none"> <li>To be determined by Cape Agulhas Municipality.</li> </ul>
9	Continue with Leak Detection and Repair	<ul style="list-style-type: none"> <li>- Continue with current process of leak detection and pipe repair throughout the Municipality</li> </ul>	<ul style="list-style-type: none"> <li>To be determined by Cape Agulhas Municipality.</li> </ul>
10	Public/ Schools awareness campaign	<ul style="list-style-type: none"> <li>- Continue with public awareness campaign in order to educate consumers to reduce water wastage.</li> <li>- Once a year a schools education programme on water conservation should be undertaken.</li> </ul>	<ul style="list-style-type: none"> <li>- R100 000/year for WC/WDM awareness activities and material.</li> <li>- R70 000/year for school education programmes.</li> </ul>

#### 2.4.2 Discussion

The first project for implementing WC/WDM measures should be to create a dedicated WC/WDM officer post in Cape Agulhas Municipality. This post would ensure that the WC/WDM drive gets the momentum it requires in order to be successful.

Following the results from this study, all stands identified to be investigated, should be investigated and all remedial work (which would include installation of new water meters, replacement of faulty water meters and maintenance to the treasury database) performed as soon as possible afterwards. It is proposed that the Water Department works closer with the Finance Department to ensure that anomalies within the treasury data, or any even that are not within the system are added as

soon as possible. The refinement of the treasury database would go a long way into improving the accuracy of the water sales data gathered by the Municipality.

The sites of the large users should be visited individually with the objective of obtaining insight into their consumption components and patterns and to investigate potential water saving measures that can be applied at each of these consumers.

Although pressure management has been implemented in certain areas, the entire water network has not been investigated for pressure management potential. This is therefore recommended as a project as indicated above.

The continuation of pipe replacements and the pipe replacement prioritisation project is essential to ensure that the most scientific method is used to determine the most appropriate pipes to be replaced within the Cape Agulhas municipality.

It is proposed that the water meter replacement programme is continued with in order to replace all illegal and faulty water meters.

In order to assist with the reduction of the high non-revenue water (NRW) figures it is recommended that additional district management areas (DMA's) are created to refine water balancing zones. These areas are smaller discrete supply areas in the network which are supplied from a secondary bulk water meter. It is therefore ideal to perform zonal water balances, but the individual stands in each of the zones are not clearly defined. These links could easily be generated from the hydraulic model and subsequently monthly zonal water balances performed. These areas would also be useful for taking minimum night flow (MNF) measurements in future.

Monitoring the ILI's of the various demand management zones will give an indication as to which area has the highest probability of decreasing NRW. The areas identified should then be studied closer and should be given prioritisation for the creation of pressure measurement zones and pipe replacements.

The continuation of the current process of leak detection and pipe repair throughout the Municipality is vital to ensure that the work done so far isn't undone.

One of the major contributions to WC/WDM is the level of awareness and understanding created about these topics amongst both consumers and the water services authority. Changing the opinions and behaviour of both water users and managers is a fundamental component of WC/WDM. With sufficient information and a strong campaign, knowledge is deepened, gradually creating a change in attitudes and education, and finally, behavioural change. The degree of behavioural change achieved will depend completely on the nature and effectiveness of the campaign. The Cape Agulhas Municipality has effectively implemented a public awareness campaign, but this should be continued with.

A study by the Water Research Commission in 2004 into the water use at schools in Gauteng indicated that 30% to 40% of the current water consumption of schools could be saved by implementing WC/WDM strategies at schools. In Cape Agulhas Municipality this potential should surely also exist.

It is proposed that the priorities for implementing these projects are as listed above, i.e. from 1 to 10. The projects can however be implemented in a phased approach in order to accommodate the available budgets and to align the deliverables with the priorities of Cape Agulhas Municipality.

## 2.5 Recommendations

The immediate projects and interventions required to further promote WC/WDM in order to reduce UAW in Cape Agulhas is described in the previous paragraphs, but summarised below for easy reference.

- Appoint a dedicated WC/WDM support officer.
- Improved billing by continued co-operation with Finance Department
- Investigate large water users
- Investigate additional pressure management projects
- Continue with pipe replacement
- Continue with water meter replacement
- Refine zone water balancing per DMA
- Monitoring of ILI's per zone
- Continue with leak detection and repair
- Public/schools awareness campaign

### 3. CONCLUSIONS

The UAW figure for Cape Agulhas is 30,6% which indicates that room for implementing WC/WDM measures exist in order to reduce the UAW figure.

Analysis of the Cape Agulhas treasury data has indicated that some anomalies in the billing data exist which need to be investigated. All stands identified in this study to be investigated, should be investigated and all remedial work (which would include installation of new water meters, replacement of faulty water meters and maintenance to the treasury database) performed as soon as possible afterwards. Once these anomalies are corrected and the billing data thereby “cleaned up”, the UAW figure for Cape Agulhas should be reduced.

After considering the results of the billing data analysis, the review of relevant WC/WDM studies and discussions with officials of the Municipality, 10 (ten) projects were identified to be implemented as priority in order to further promote WC/WDM in Cape Agulhas Municipality.

Finally, the creation of a dedicated WC/WDM officer to serve the municipality to drive this process is essential, and furthermore the internal profile of WC/WDM should be raised to such a level as to demonstrate political support and buy-in at Cape Agulhas Municipality. Without this, the success and impact of the entire programme may be compromised.
